Hope for Haiti Prepares for Heavy Rains While Continuing to Focus on Public Health Education

Having responded to the devastating hurricanes (Fay, Gustav, Hanna and Ike) in 2008 which caused deadly flood conditions in Les Cayes, Hope for Haiti has been working throughout the week to prepare for Hurricane Tomas, knowing firsthand how vulnerable Haiti is to heavy rain conditions. Hope for Haiti has mobilized emergency relief supplies, prepared for flooding conditions, and is coordinating with other private and public partners in the South to plan for an effective response after the storm. Hope for Haiti will be watching Hurricane Tomas very closely over the next 36 hours, while our team continues to work around the clock to prepare for expected flash flooding conditions.

Amidst the Cholera Outbreak and Storm Preparation, the Hope for Haiti Public Health Team Educates Volunteers on How to Better Protect Their Communities

Hope for Haiti's Public Health Nurses met with local community members from 12 of Hope for Haiti's supported school locations, who are being trained as Hope for Haiti CHWs (Community Health Workers). These dedicated men and women are volunteers who want to bring better health to their communities by being trained in public health education. Today, Hope for Haiti Public Nurses focused on training the CHWs in Cholera prevention and storm safety precautions - critical and timely information that these volunteers will help disseminate throughout their communities.

Hope for Haiti Public Health Nurses Train Community Health Workers.

HAITI NEEDS YOUR HELP to deal with three major crises. If you haven't already done so, please consider making a donation at this time. [Click here](#) to contribute online or you may mail a donation to our office:
